

## Abstract

A method and a system for dynamically updating information for publication on the Internet. Meaningful content is extracted from information received from multiple sources such as news sources. The information can contain text, sound, images and video.

- 5 A set of characterizing features for the received information is determined. Information having common characterizing features is grouped together into a number of clusters. The information obtained in the grouping step is used to determine how to publish the information contained in a cluster based on a customer request for information. This customer request can be based on a query or a customer profile assigned to the customer.
